

1 x 20 Stereo Audio VP-715-02 Distribution Amplifier

The VP-715-02 Audio Distribution Amplifier features 20 isolated outputs of stereo sound from either a balanced or unbalanced input. The professional specification provides very low noise, flat frequency response, low distortion and a high overload margin, as demanded by today's digital audio standards.

- Sophisticated professional specification. Very low noise (S/N 120dB), flat frequency response, low distortion and high overload margin
- Low-cost solution to professional hi-fi audio distribution in Video Cassette Duplication systems
- Highly reliable - isolated outputs offer short-circuit protection
- Loop-through on audio inputs enabling daisy-chaining for economic audio distribution
- Switchable selection of balanced or unbalanced audio input
- Internal gain adjustment, accessible from rear
- Low power consumption.
